Third and Final Forecast of the Spring Oilseed
Crops of Bengal, 1936-37.

(Note.—On an average of the five years ending 1934-35, the area under linseed in Bengal has represented some 3.6 per cent. and that under rape and mustard 11.6 per cent. of the total area under these crops in British India.)

Character of the season.—As reported in the second forecast the weather was generally favourable for sowings and for the early period of growth. Subsequent conditions were more or less helpful except in parts of Presidency Division where heavy rainfall affected the crops. Injury to crops by insect-pests is reported from some districts. On the whole, the season was satisfactory for the crops this year.

Area sown.—Oilseeds are chiefly grown in the Rajshahi, Dacca and Presidency Divisions. In the other two divisions the cultivation is not extensive. The total area under these crops (excepting sesamum for which separate forecasts are issued) is returned at 916,700 acres as against 850,400 acres last year.

Outturn.—From the District Officers' estimates the provincial outturn of the different oilseed crops works out at 85 per cent. as against 76 per cent. last year.

Taking 7½ths maunds as the normal yield per acre for linseed, 7½ths maunds for rape and mustard and 4½ maunds for other oilseeds, the total yield of the crops for the province is estimated at 211,500 tons this year as against 176,700 tons last year.

Director of Agriculture, Bengal.

Now, therefore, in exercise of the power conferred by section 2A, read with sub-section (1) of section 2 of the Epidemic Diseases Act, 1897 (Act III of 1897), the Governor of Bengal is pleased to prescribe the following temporary regulations for the prevention and control of cholera, and for the medical inspection, isolation, observation and surveillance of persons suffering from, or suspected of being infected with, cholera in the said district for a period of two months:—

- (c) "Board" means a District Board constituted under the Bengal Local Self-Government Act of 1885;

2. Whenever any land is held jointly by two or more persons, whether as owners or occupiers of that land, such persons shall be held jointly and severally liable for carrying out any measure ordered in a notice under these regulations, and the names of any one or more of such joint-holders may be entered upon such notice at the discretion of the District Health Officer and the District Health Officer shall not be bound to enter the names of all the joint-holders in the notice.

Notices.

3. If in any case the District Health Officer considers that the issue of a notice under these regulations is likely to lead to such an amount of delay as might facilitate the spread of cholera he may forthwith take such steps as he may think fit for carrying out the work, and shall thereafter, as soon as possible, issue a notice on the person concerned stating the reason why such work has been carried out.

4. If any measure which the District Health Officer has, by a notice issued under these regulations, required to be carried out, be not carried out to his satisfaction within the time stated in the notice the District Health Officer shall be entitled to carry out the measure.

Costs and compensation.

5. (1) All expenses incurred in carrying out any work in pursuance of an order issued under these regulations shall be paid by the Board except in any case where the order directs a person to carry out any work in relation to property in his possession, in which case the expenses shall be paid by that person:

that the particulars of the said scheme are as follows:—

(a) The scheme is designed to give an initial daily supply of 560,000 gallons of filtered and chlorinated water to a population of 56,000 persons. The water, which will be drawn from the Calcutta Corporation mains, will be measured by a venturi meter to be provided by that body, and will be paid for at the rate of 4 annas per 1,000 gallons. If required, the daily supply can be raised to 640,000 gallons by pumping for longer hours.

The distribution of the water will be made on the "decentralised storage" system. In preparing the scheme the possibilities of an independent supply has been kept in view, and the distribution system has been so designed as to be capable of being fed from either source.

The filtered water in the Calcutta Corporation mains will be led by an 18" diameter pipe to the existing elevated reservoir of 20,000 gallons capacity where it will be chlorinated as an additional measure of safety. It will then be delivered to the town through a 15" trunk main. Arrangements are provided by means of which it will be possible to maintain a pressure of 80 feet.

The scheme provides for 600 house connections in addition to 190 street tanks.

(b) The estimated cost of carrying out the scheme is Rs. 3,60,500 excluding cost of land.

(c) The estimated cost of maintenance is Rs. 66,600 per annum, on the basis of daily supply of 560,000 gallons in seven hours.

(d) Both the capital and the annual maintenance costs will be met from the municipal fund.

(e) The total annual charge to be met by water rate is estimated to be Rs. 53,667, and the balance of the maintenance cost will be made up from the general fund.

(f) The percentage of water rate on the annual value of holdings is $3\frac{1}{2}$ per cent.

(g) The average incidence of such water rate per head of the population will be 15·37 annas.

2. The scheme will be taken into consideration on or after the 15th July 1937, and any objection or suggestion with regard thereto, which may be received by the undersigned before that date, will be duly considered.
